INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter II of the Patent Cooperation Treaty)

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference PC-9264	FOR FURTHER ACTION See Form PCT/IPEA/416						
International application No.	International filing date (day/month/year)	Priority date (day/month/year)					
PCT/JP2004/011801	11.08.2004	19.08.2003					
International Patent Classification (IPC) or national classification and IPC							
B23Q11/00							
Applicant HONDA MOTOR CO., LTD.							
 This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36. 							
2. This REPORT consists of a total of	5 sheets, includi	ng this cover sheet.					
 This report is also accompanied by A 	NNEXES, comprising:						
	to the International Bureau) a total of	sheets, as follows:					
a. (sent to the applicant and to the International Bureau) a total of sheets, as follows: sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).							
sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.							
b. (sent to the International	l Bureau only) a total of (indicate type and num	ber of electronic carrier(s))					
		, containing a sequence listing and/or tables					
related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).							
4. This report contains indications rela	ting to the following items:						
Box No. I Basis of the	Box No. I Basis of the report						
Box No. II Priority		,					
Box No. III Non-estab	Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability						
	nity of invention

 - Document 1: Microfilm of the specification and drawings annexed to the request of Japanese Utility Model Application No. 43618/1975 (Laid-open No. 122479/1976) (Mitsubishi Motors Corp.), 04 October 1976
 - Document 2: JP 62-246455 A (Hamai Sangyo Kabushiki Kaisha; Kabushiki Kaisha Burobakku), 27
 October 1987
 - Document 3: Microfilm of the specification and drawings annexed to the request of Japanese Utility Model Application No. 91008/1988 (Laid-open No. 15244/1990) (Kokan Kikai Kogyo Kabushiki Kaisha; NKK Corp.), 30 January 1990

Document 1 cited in the international search report discloses a chip removal method for removing chips and other such residual materials which remain adhered to the interior of a saccate machine hole that has been formed in a work, wherein air is blown in the direction towards the bottom part of the machine hole by means of an air blowing nozzle so as to blow against the bottom part of the machine hole and then form a spiralling flow with a tornado-like form that blows upwards from the vicinity of

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

PCT/JP2004/011801

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

the bottom part of the work hole in the direction towards the opening part of the work hole in order to lift and remove the aforementioned residual materials from the aforementioned work hole by means of said spiralling flow; furthermore, document 1 also discloses an air blowing nozzle for removing chips and other such residual materials that remain adhered to the interior of a saccate machine hole in a work by means of a spiralling flow, wherein said nozzle is provided with a nozzle tip part that can be inserted into the aforementioned work hole and is configured so that in cases when the aforementioned work hole is a hole for a female screw, the aforementioned spiralling flow spirals in the direction for loosening the screw.

Meanwhile, document 2 cited in the international search report discloses technical features pertaining to a chip removal method wherein an air blowing nozzle converts the flow of air that traverses the interior of the nozzle into a spiralling flow and blows out the air, whereafter a suction is applied in order to form a spiralling flow with a tornado-like form that blows upwards in order to lift and remove the aforementioned residual materials by means of said spiralling flow; furthermore, document 2 also discloses technical features pertaining to an air blowing nozzle for removing chips and other such residual materials by means of a spiralling flow, wherein said nozzle is provided with a part for generating a spiralling flow (refer to "nozzle (14)" in document 2), which converts the flow of air that traverses the interior of the nozzle into a spiralling flow.

International application No.
PCT/JP2004/011801

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Document 3 cited in the international search report discloses technical features pertaining to a method for converting the flow of air that traverses the interior of a nozzle into a spiralling flow, and also discloses technical features pertaining to an air nozzle equipped with a guide that has been twisted into a screw-like form and a part for generating a spiralling flow which converts the flow of air that traverses the interior of the nozzle into a spiralling flow, wherein said part for generating a spiralling flow is provided to the aforementioned nozzle tip part.

Claims 1 to 4

The inventions set forth in claims 1 to 4 do not involve an inventive step in the light of document 1, document 2 and document 3.

It would have been easy for a person skilled in the art to conceive of employing the abovementioned technical features that are taught in document 2 and document 3 when configuring the chip removal method and the air blowing nozzle for removing chips that are taught in document 1.
